The Department of Rehabilitation Medicine at Skåne University Hospital offers interdisciplinary and accredited (CARF Commission on Accreditation of Rehabilitation Facilities, USA) medical rehabilitation for people with disabilities due to chronic pain, and injuries and diseases in the brain, spinal cord, peripheral nervous system or musculoskeletal system. Patients with spinal cord and brain injuries, stroke, chronic neurological disorders, post-polio and in need of musculoskeletal rehabilitation are served at Orup. In Lund there is a unit for physical medicine and advanced physiotherapy, a pain clinic and rehabilitation teams for chronic pain (day care). The professional team members – physicians, rehabilitation psychologists, neuropsychologists, physiotherapists, occupational therapists, social workers, speech pathologists, nurses, assisting nurses and other care personnel - are specialists in medical rehabilitation.

The person who needs rehabilitation is an active team member and at the centre of our team activities. Team members work together with the patient and their families, establishing goals, selecting appropriate treatment options, and setting the pace for recovery.

The Department of Rehabilitation Medicine has over 160 fulltime positions organised in five units and 15 interdisciplinary rehabilitation teams. The Department is a teaching affiliate of Lund University and actively involved in national and international research projects. As one of the largest rehabilitation facilities in Sweden we are a medical rehabilitation resource centre in southern Sweden.
